

Installation Guide for Light Shield for ICE4

There are two different types of light shields: one for car ends with roof gardens (smaller, shown in green in the photos) and one for car ends without roof gardens (with two small flaps at the top, shown in red in the photos). Since there are different variants of the ICE, there may be some light shields left over at the end.

- Open the housing according to the KATO instruction to install interior lighting.
- Carefully slide the light shield along the side of the stroller frame between the head of the wagon and the window insert until it is all the way up.

- Then reassemble the housing according to the instructions. Tip: Pay attention to the arrows on the inside of the housing lid and hold the unit upside down to prevent the light shield from shifting.
